

Best Current Operational Practice for operators:

How to run your email server on IPv6 – and survive...

Jan Žorž

zorz@isoc.org

Future work and ideas

- Operators say: “Mail server on IPv6? No, thnx!”
- Anti-spam mechanisms? IP reputation?
- How to survive on IPv6 when it comes to incoming email server and protecting from the spam?
- So how about writing a BCOP document that describes the solutions and best current practice on the above topic?

Future work and idea

Anyone in the room has operational experience with this topic and is willing to join the team of co-authors?

Any takers? 😊

Questions? Suggestions? Ideas?

Thanks!
