

IPv6 and the Enterprise (Workshop)

Wilhelm Boeddinghaus
iubari GmbH

Benedikt Stockebrand
Stepladder IT Training+Consulting GmbH

RIPE 75
October 2017
Dubai, United Arab Emirates

About Us

- Trainers and Consultants
- 10+ years of IPv6 experience each
- Extensive experience with IPv6 deployments

Scope of this Talk

- Enterprise environments
- *Client* networks

- Large number of nodes
- Limited skills
- BYOD
- IoT

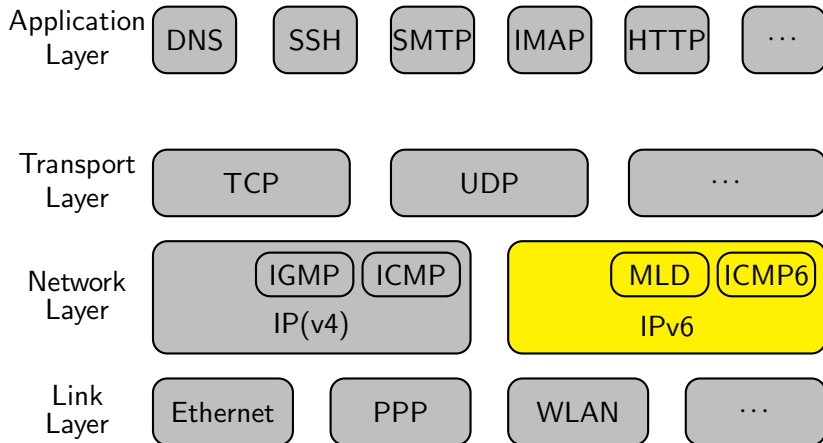

Part I

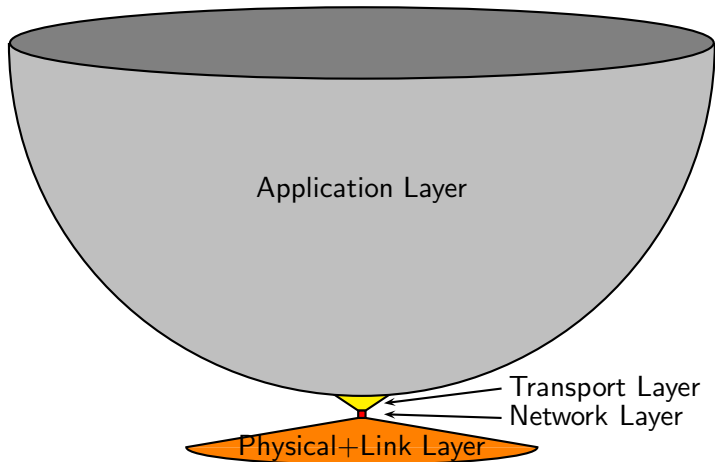

Common Misconceptions

- IPv6 unavoidable
- Don't procrastinate
- IPv6 is *not* "IPv4 with longer addresses" . . .
- IPv6 is a management problem
- "IPv6 Deployment" vs. IPv4 Retirement

The “Official” TCP/IP Stack

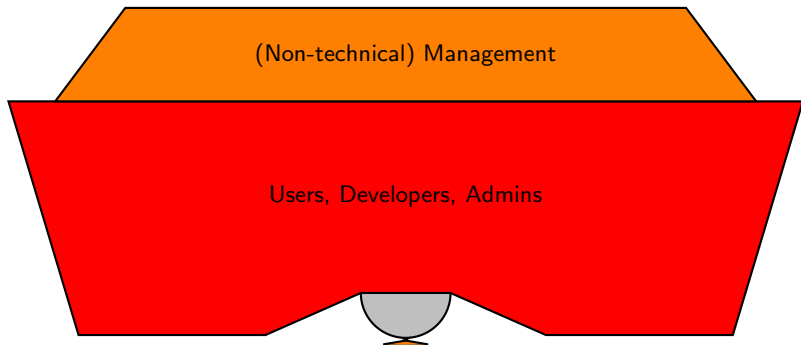

Common Misconceptions

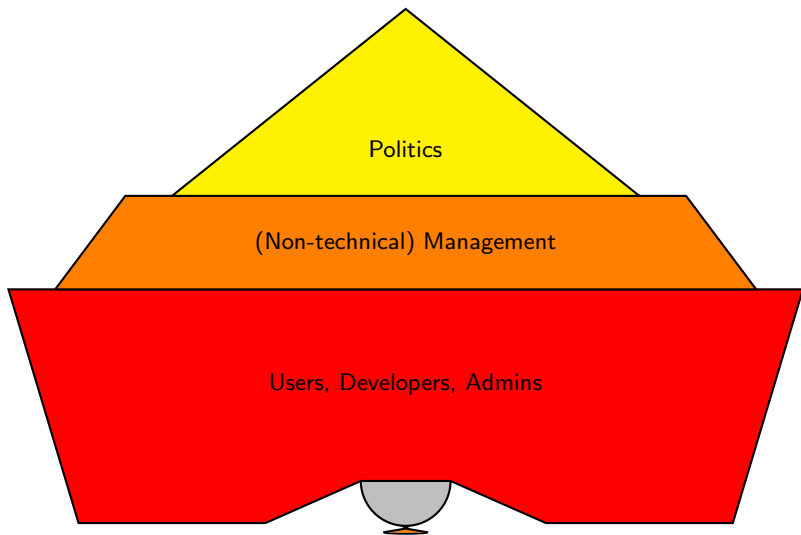

- Procurement
- Test/Training Environment
- Train people
- “Spy” network
- Inventarize for IPv6

- IPv6 is highly unpredictable
- Risk driven management
- Incremental deployment vs. Big Bang

- Highly vertical software
- Find and fix early
- A management problem
- Really a lot of detail work

- Upgrade
- Replace
- Terminal servers
- Dedicated IPv4-provided subnets
- Provide IPv4 as needed (details on Wednesday)

- Avoid large scale dual-stacking

Part II

Your Questions?

- SLAAC for Layer 3
- Stateless DHCP for Layer 7

- RDNSS+DNSSL for Android
- Stateless DHCP for Windows before Creators Update

- Do it. Seriously.
- Separate by security privileges
- Point-to-point can make sense

- Overall goals
 - Simplicity
 - Comprehensiveness
 - Flexibility
- Prefixes
 1. Use no more than 1/8 or 1/16 of your allocation
 2. Allocate aggregate prefixes by “site”
 3. Allocate by security profile
- Interface IDs
 - Suggestion: Global counter(s)
 - Suggestion: Separate ranges for routers and hosts
 - Don't reuse

Part III

Epilogue
